

Cooper and Turner choose RALC-Conni

Sheffield-based fastener manufacturer, Cooper and Turner Ltd, has installed an Italian-built RALC-Conni Gemini 802 HM carbide sawing machine from Sawcraft UK.

"After studying the initial proposals and realising that they had the technology to incorporate additional processes such as product identification within a fully automated line, we realised that we had found our supplier," says Paul Marston, works manager at Cooper and Turner.

Examples of the modifications include: front loading, 5 tonne

weight capacity automatic bundle loader features an increased storage capacity; extended electric axis carriage feed stroke of 1m; an innovative 'moving' cutting

vice to allow maximum material utilisation; and programmable in-line product identification.
